

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Module 2: Basic Programs

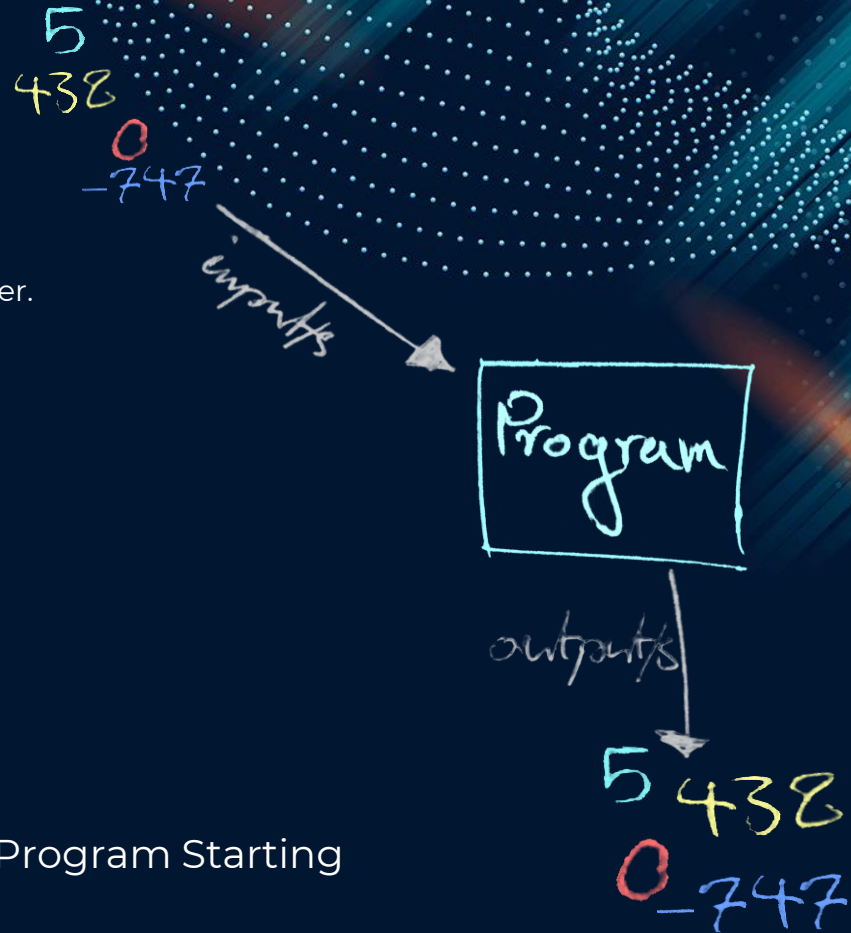

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

1) Start

STEP1: Program Starting

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

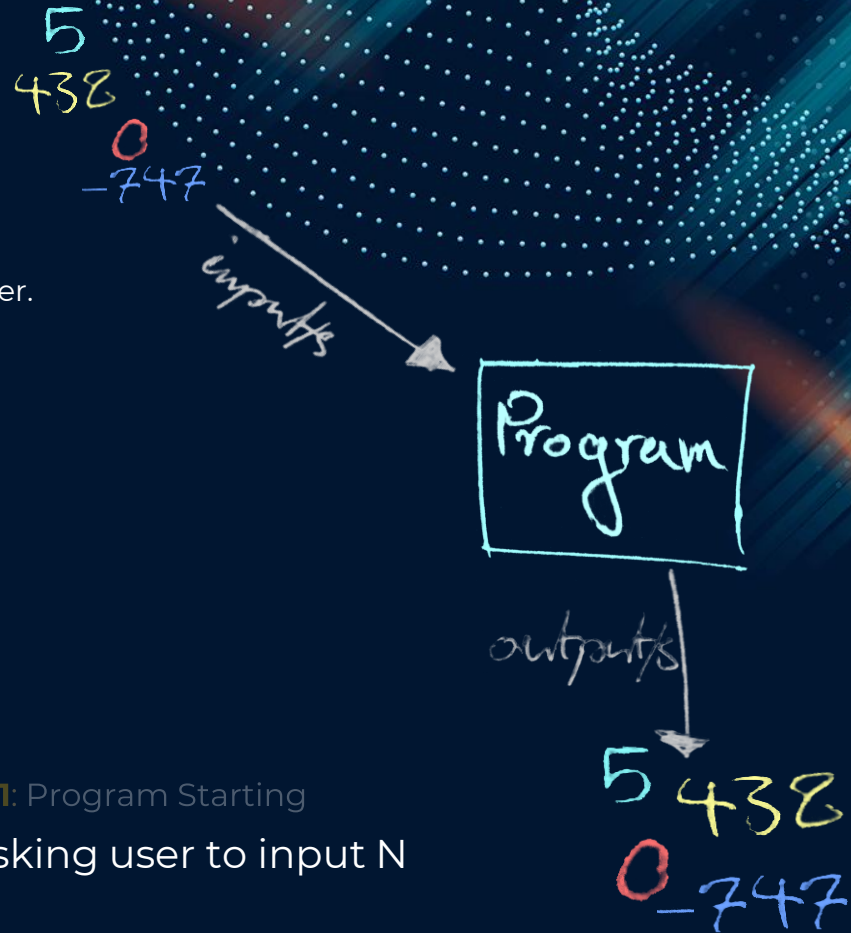

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

- 1) Start
- 2) **Input** the Number **N**

STEP1: Program Starting

STEP2: Asking user to input N

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

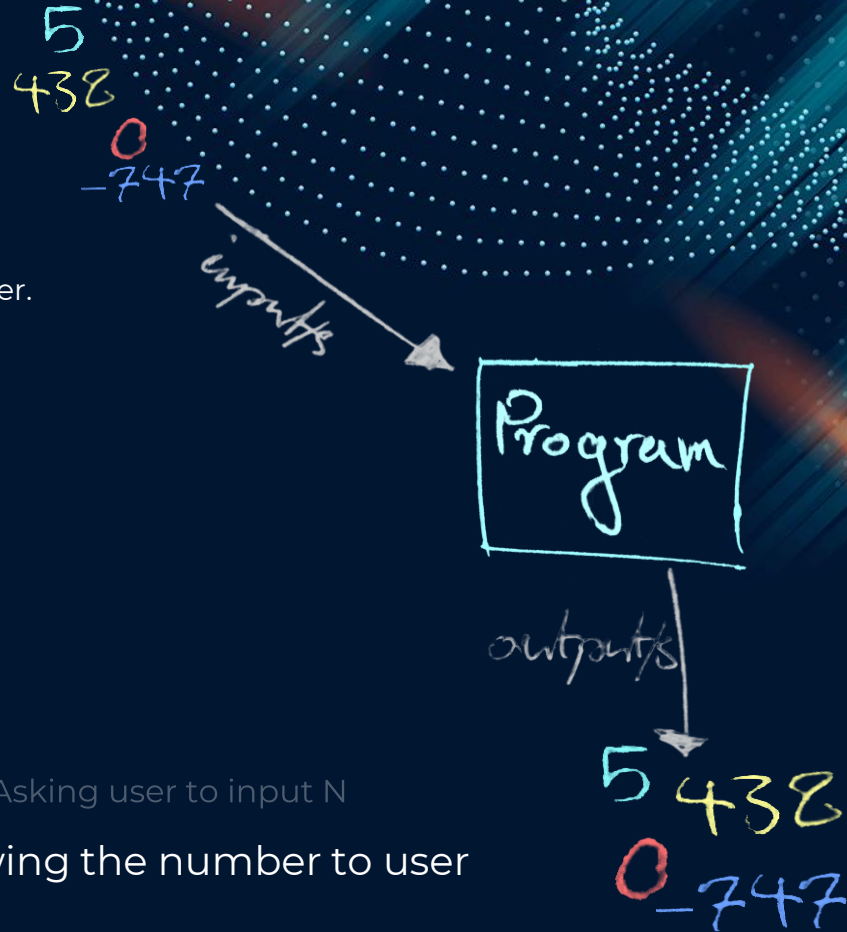

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

- 1) Start
- 2) **Input** the Number N
- 3) **Display** the N

STEP2: Asking user to input N

STEP3: Showing the number to user

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

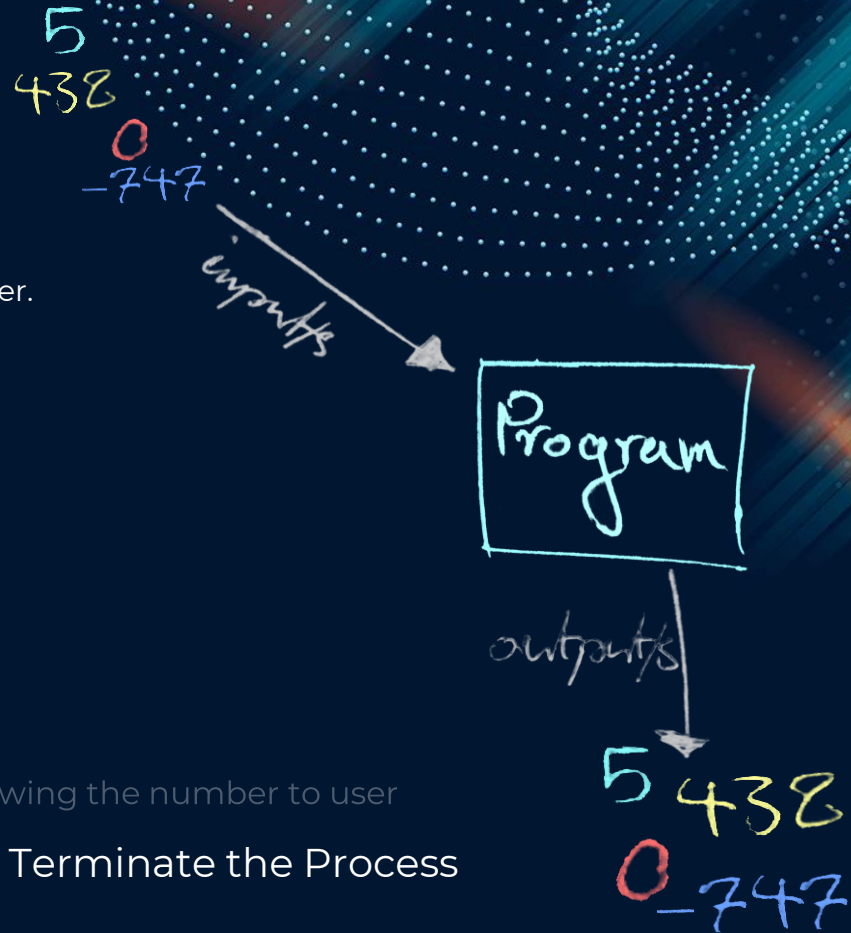

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

- 1) Start
- 2) **Input** the Number **N**
- 3) **Display** the **N**
- 4) End

STEP3: Showing the number to user

STEP4: End: Terminate the Process

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

- 1) Start
- 2) **Input** the Number **N**
- 3) **Display** the **N**
- 4) End

Runtime

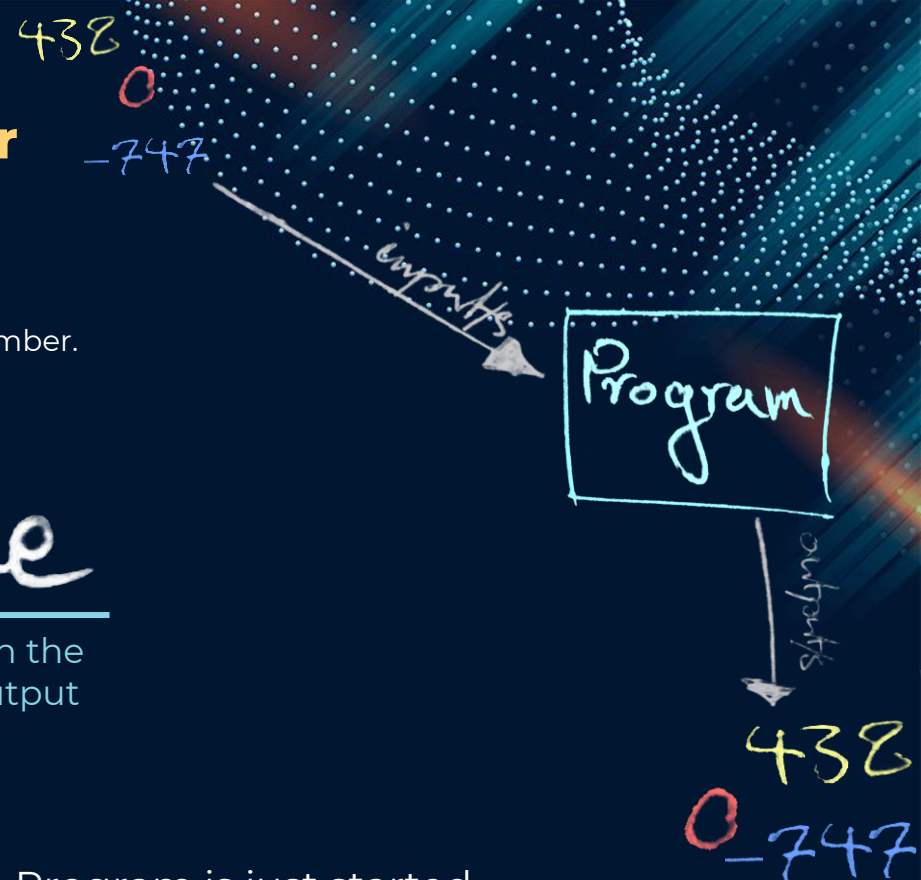

Test the Algorithm with the input and expected output

INPUT: 5
OUTPUT: 5

Runtime
Runtime

Program is just started

User enters 5, Storing and naming it "N"

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

- 1) Start
- 2) **Input** the Number **N**
- 3) **Display** the **N**
- 4) End

Runtime

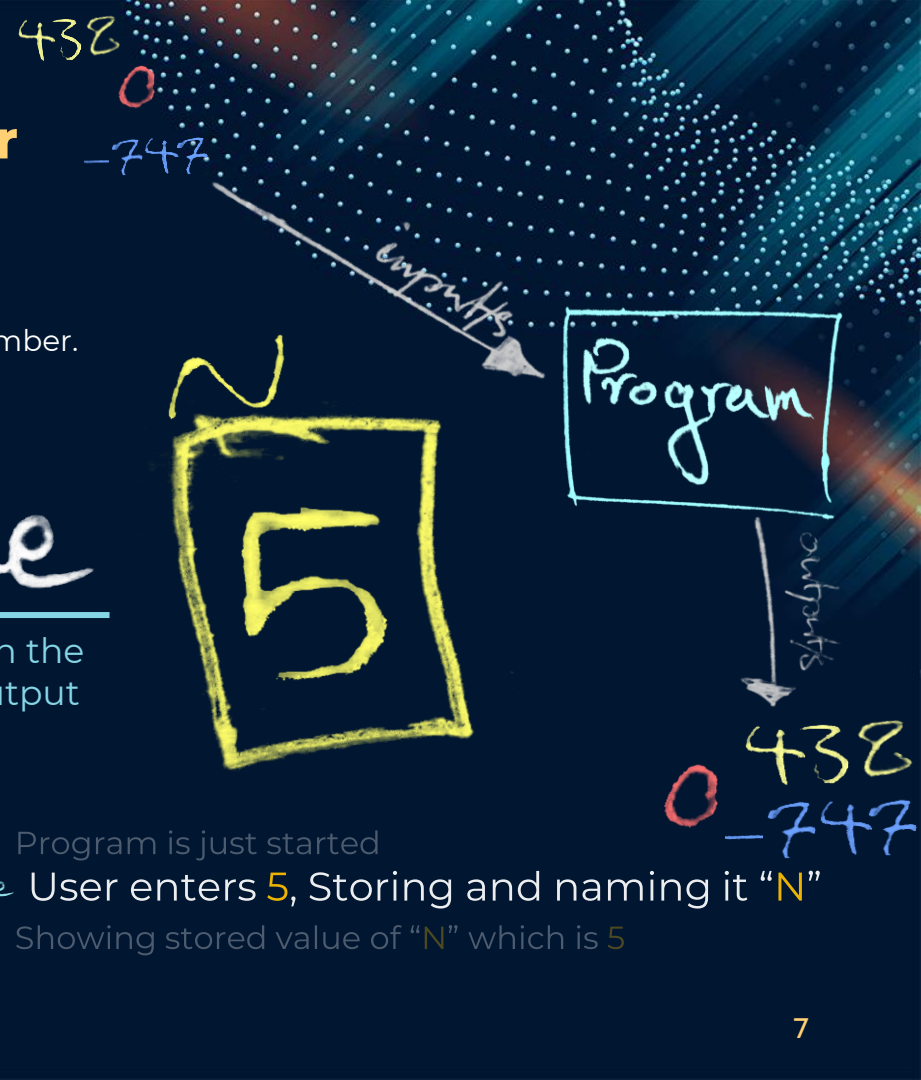

Test the Algorithm with the input and expected output

INPUT: 5
OUTPUT: 5

Runtime Program is just started

Runtime User enters 5, Storing and naming it "N"

Runtime Showing stored value of "N" which is 5

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

- 1) Start
- 2) **Input** the Number **N**
- 3) **Display** the **N**
- 4) End

Runtime

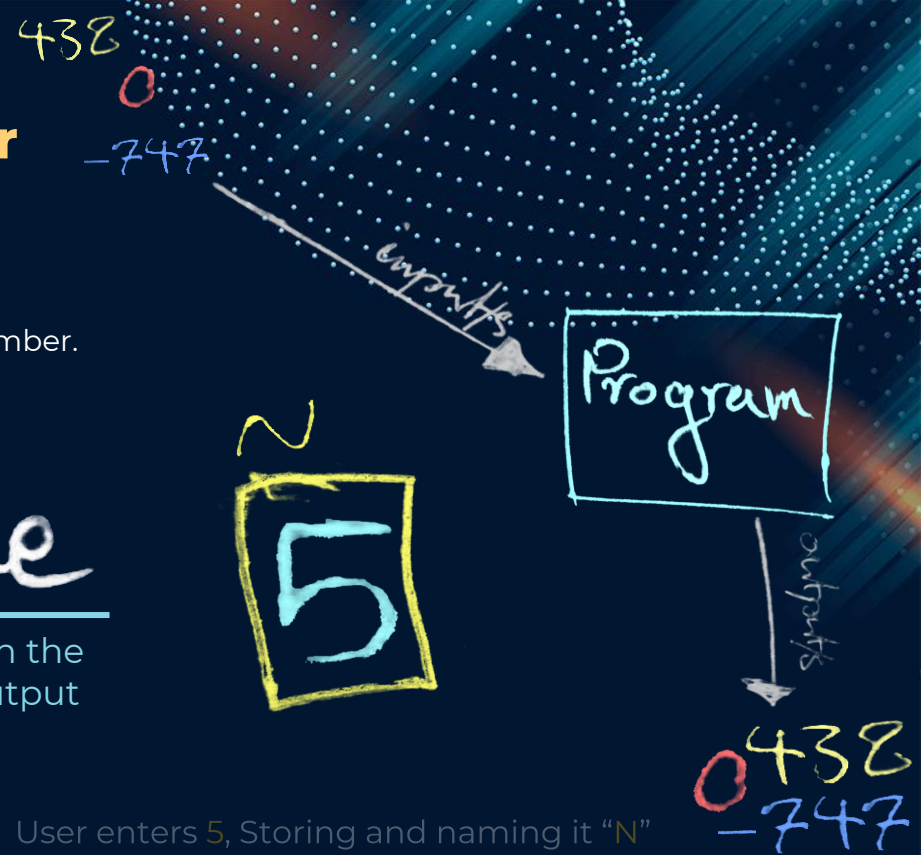

Test the Algorithm with the input and expected output

INPUT: 5
OUTPUT: 5

Runtime User enters 5, Storing and naming it "N"

Runtime Showing stored value of "N" which is 5

Runtime End, Terminating the program

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Algorithm

- 1) Start
- 2) **Input** the Number **N**
- 3) **Display** the **N**
- 4) End

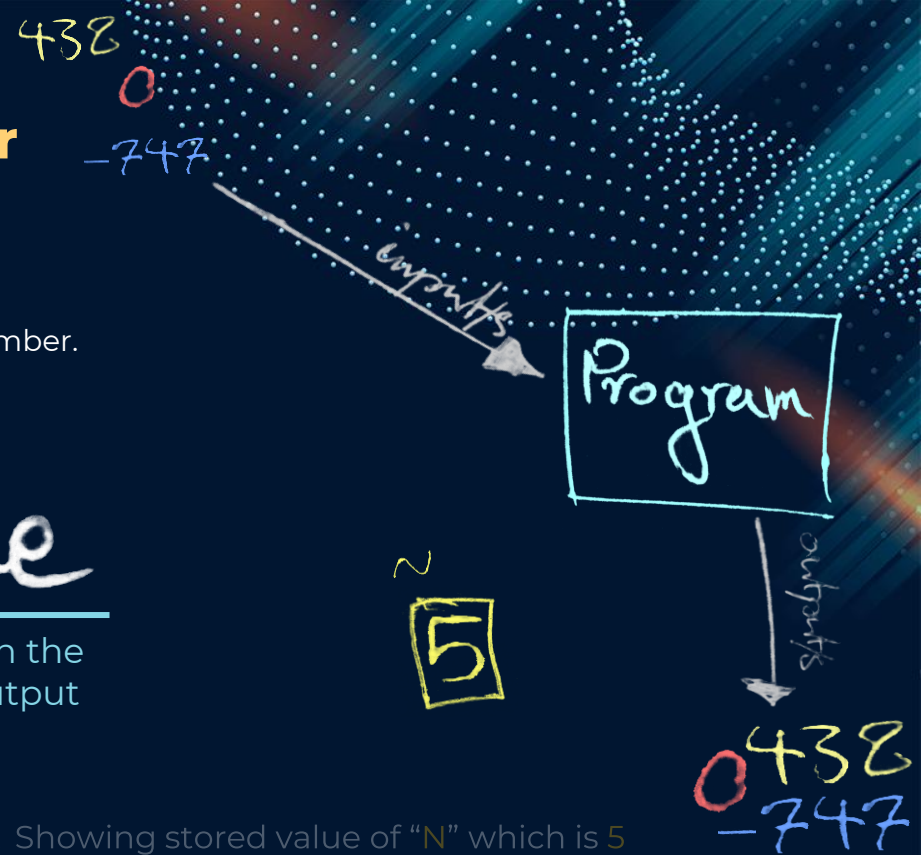

Runtime

Test the Algorithm with the input and expected output

INPUT: 5
OUTPUT: 5

Runtime Showing stored value of "N" which is 5

Runtime End, Terminating the program

Module 2: Basic Programs

E. Outputting the Input Number

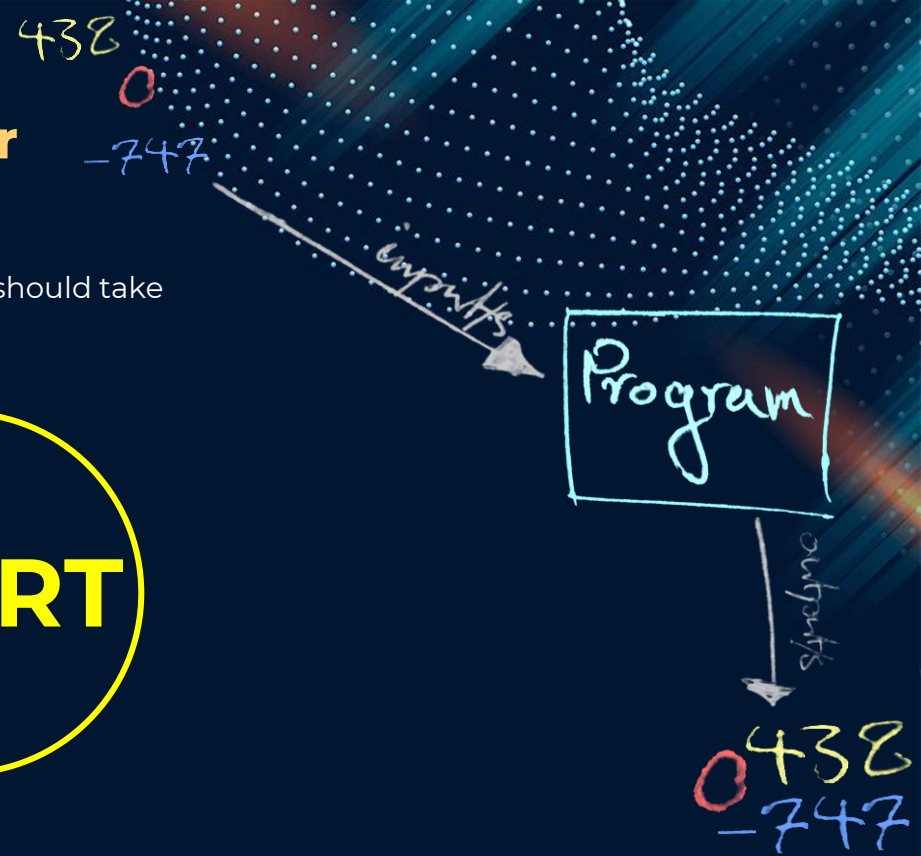

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Flowchart

STEP1: Program Starting

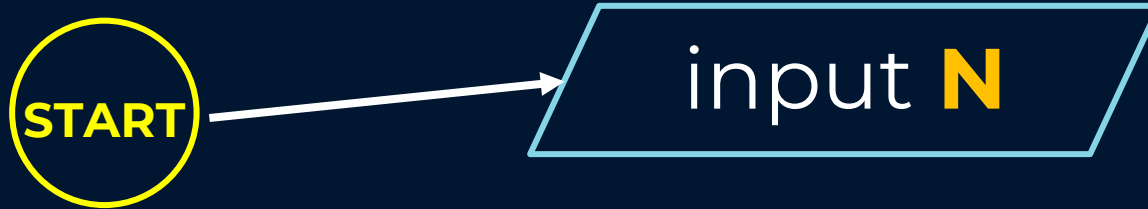

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

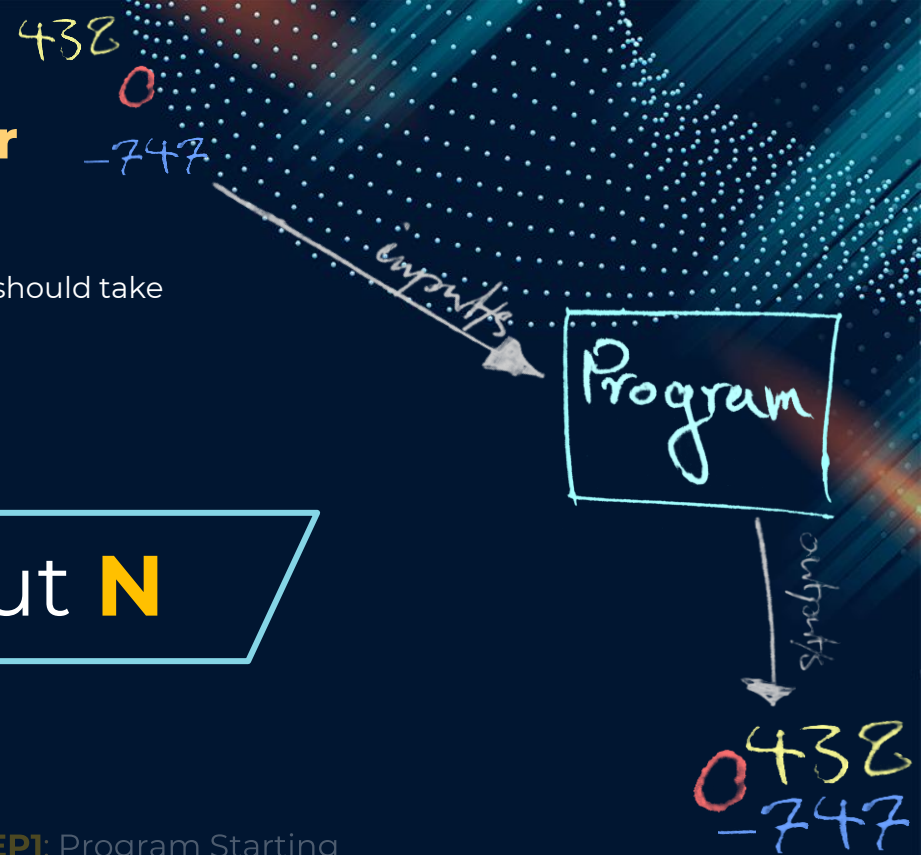

Write a program to output the input number! The program should take an integer number as input and display that number.

Flowchart

STEP1: Program Starting

STEP2: Asking user to input N

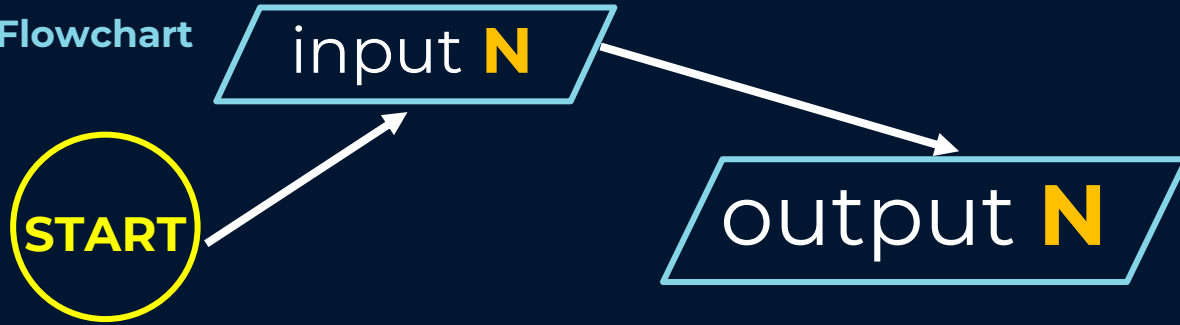

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Flowchart

STEP2: Asking user to input N

STEP3: Showing the number to user

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

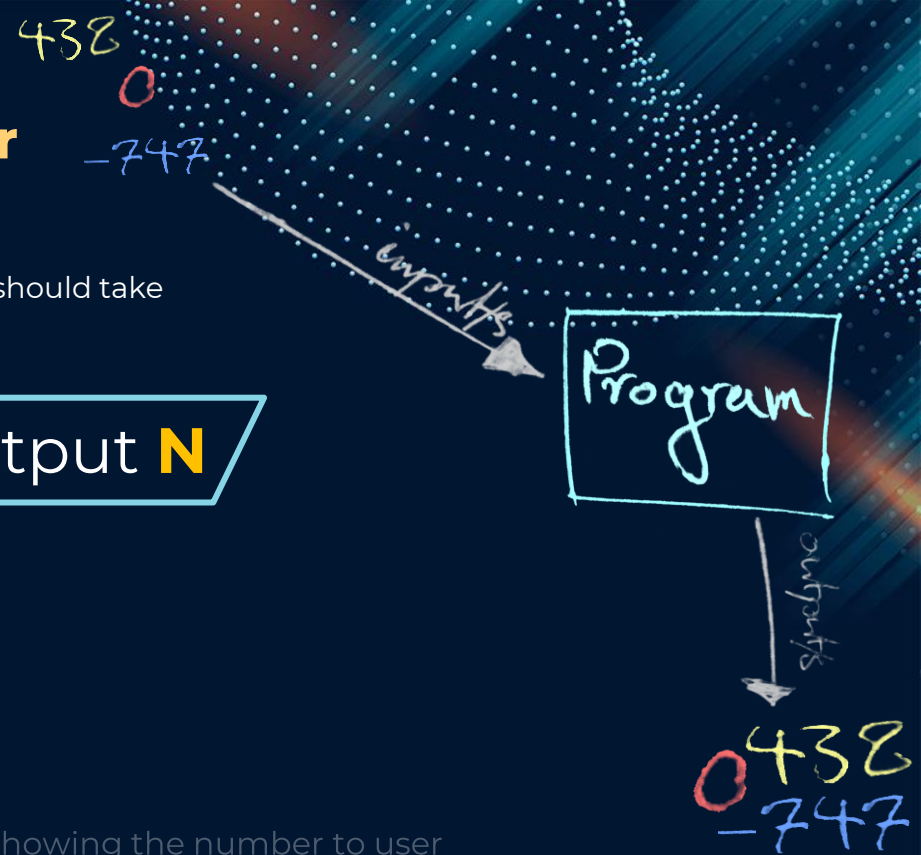

Write a program to output the input number! The program should take an integer number as input and display that number.

Flowchart

STEP3: Showing the number to user

STEP4: End: Terminate the Process

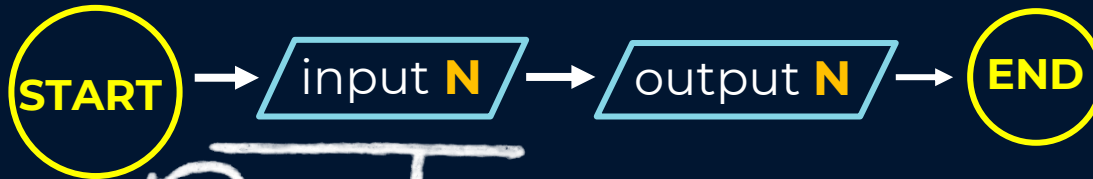

Module 2: Basic Programs

E. Outputting the Input Number

Problem Statement

Write a program to output the input number! The program should take an integer number as input and display that number.

Flowchart

Runtime

Test the Flowchart with the input and expected output

INPUT: -747

OUTPUT: -747

Runtime Program is just started
Runtime User enters -747, storing and naming it "N"
